

Amendment to the claims:

1. (Currently amended) An ostomy pouch for receiving human body waste from a stoma comprising inner and outer pouches, the outer pouch includes a curved periphery and a sliding zipper fastener on a portion of the outer pouch curved periphery configured to permit re-closeable opening of the outer pouch along a curved part of the curved periphery for replacement of the inner pouch, wherein the outer pouch is attachable to the body and includes a first aperture for accommodating a stoma, and the inner pouch comprises a second aperture, said first and second apertures being at least partly aligned for communication when said inner and outer pouches are in an operative position, the inner pouch being removably securable directly or indirectly to the outer pouch by a separable coupling, the separable coupling permitting replacement of the inner pouch by a replacement inner pouch, ~~the re-closeable opening on said part of the curved periphery opened by said fastener having a length which permits being adequate in length to permit~~ folding of an outer pouch wall ~~so as to facilitate and~~ unhindered access to the separable coupling.

Claims 2-10 (Canceled)

11. (Previously presented) The ostomy pouch of claim 1, wherein the separable coupling is an adhesive coupling.
12. (Currently amended) The ostomy pouch of claim 1, wherein the inner pouch is configured for (i) ~~removal from the outer pouch, and~~ (ii) disposal in a flushable water closet.

Claims 13-16 (Canceled)

17. (Previously presented) The ostomy pouch of claim 12, wherein the inner pouch comprises water disintegrateable or water dispersible material.

Claims 18-22 (Canceled)

23. (Currently amended) The ostomy pouch of claim 1, wherein the sliding zipper fastener includes at least one curved zipper track and a movable slider, the slider comprising one or more curved zipper track engaging surfaces having a characteristic to accommodate ~~a curvature of the path of~~ the slider along the curved zipper track.
24. (Currently amended) The ostomy pouch of claim 1, wherein said sliding zipper fastener includes a zipper slider and at least one non-toothed zipper track, the track having a curved shape to define an at least partly curved path along which the slider is slidable, and wherein the slider comprises one or more track engaging surfaces having a characteristic to accommodate the curved path ~~of the slider~~ along the non-toothed track.
